University of Saarland, Saarbrücken, Germany

Master's Thesis Colloquium
16 April 2015

Some syllable(s) in a word more accentuated/prominent¹

um·FAHR·en	vs.	UM·fahr·en
<i>to run over</i>		<i>to drive around</i>

- ▶ German: variable stress placement, contrastive stress¹
- ▶ French: no word-level stress, final syllable lengthening²

Goal: Computer-Assisted Pronunciation Training (CAPT) for lexical stress errors for French learners of German

Motivation

Lexical stress errors by French learners of German

- Annotation of a learner speech corpus

- Inter-annotator agreement

- Frequency of errors

Error diagnosis

- Word prosody analysis

- Diagnosis by comparison

- Diagnosis by classification

Feedback

- Implicit

- Explicit

- Self-assessment

The de-stress CAPT tool

Criteria for selecting errors to target in a CAPT system.

Lexical stress errors are:

- ▶ Frequently produced by French learners of variable-stress languages^{1,2}
- ▶ More important for intelligibility in L2 German than other types of errors³
- ▶ Possible to identify automatically by comparison¹ or classification⁴
